

Marketing Manager Manual

This guide walks administrators and marketing managers through configuring and operating Micro-banners and Hero Banners safely and confidently—all without touching code.

Scope: Admin-only tools. Nothing here changes the public site until you publish your content.

1) Accessing the Marketing Manager

- Sign in with an admin account.
- Navigate to: Admin → Marketing Manager.
- You'll find two main areas: Micro-banners and Hero banners. Each has a live preview and controls on the same page.

2) Key Concepts

- Draft vs Published
 - New items start as Draft by default. Drafts are visible in Preview (when "Include drafts" is checked) but are not shown to real users until published.
- Resolver and caps
 - The runtime resolver selects at most 6 hero slides for the current page/context, ordered by Priority (lowest number = higher priority). If more than 6 match, the extras won't show publicly.
- Targeting and schedule
 - You can limit visibility by pages, user roles, language, and regions, and by date/time windows (Start/End). Quick presets help with common ranges.
- Guardrails (Editor Checks)
 - The editor highlights common issues like long headlines, missing alt text, missing CTA links, overlapping roles, or invalid schedules.
- Metrics (local)
 - The system tracks impressions and clicks in local storage for your machine—great for spot checks and A/B sanity, not a full analytics replacement.

3) Live Preview Toolbar

- Device selector: Desktop / Tablet / Mobile
- Zoom: Fit to window (auto) or manual (100%, 90%, 75%, 67%, 50%, 33%)

- Route: Choose a preset route or type a custom path (e.g., /shop, /deals)
- Include drafts in preview: Show Draft items so you can validate before publishing
- Allow navigation: Enable to click CTAs/links within the preview
- Note: Preview can show content even for contexts where production suppresses banners (e.g., checkout/auth) so you can validate visuals.

4) Micro-banners

- Placement: Between the Navbar and Hero Bar (not on Checkout).
- Common fields/options:
 - Copy and CTA
 - Targeting (pages, roles, languages, regions)
 - Scheduling window with presets
 - Frequency controls and trust/dismiss options
 - "Sticky on desktop only" option
- Tonal separation: Light design rules keep it distinct from the hero without changing site layout.
- Metrics: Impressions/clicks tracked locally. Reset from the metrics panel if needed.

5) Hero Banners

5.1 Create or manage slides

- Click "+ New hero slide" to create a Draft immediately.
- Or use "New from template" to start from a saved template or a background preset.
- The Slides list shows All/Published/Drafts with quick filters. Use the arrows to reorder.
- Toggle Publish/Unpublish or Duplicate from the list.

5.2 Edit slide content

- Status: Mark Draft or Publish from the editor header.
- Title and Subtitle: Keep copy concise; Editor Checks will flag long copy.
- Layouts: Choose from Copy + Image Right, Image Left + Copy, Split 50/50, Copy Only, or Image Only.
- Images:
 - Provide Desktop, Tablet, and Mobile images if possible for best framing.
 - Set Image Alt for accessibility.
 - Use the Image focal point grid to hint the important area of the image.
 - Quick uploads: Use the preview overlay or the bulk upload to create slides from multiple images quickly.
- Background preset: Choose a background theme.

- Priority: Lower numbers are shown first when multiple slides are eligible. Use “Distribute priorities” if you see tie warnings.
- CTAs:
 - Primary and secondary CTAs support text and links.
 - UTM builder: Optionally append `utm_source`, `utm_medium`, and `utm_campaign` on Save. We only add params if missing and keep your existing query/hash.
- Schedule: Set Start/End; use quick presets (Today, This weekend, 7 days).
- Targeting: Pages (comma-separated), Roles (pick one or “all”), Language, Regions (multi-select).

5.3 Templates

- Save as Template: From an editing slide, click “Save as Template,” name it, and it will be stored locally.
- Use a Template: “New from template” → pick your saved template (creates a fresh Draft immediately).
- Delete a Template: Use the ✕ action in the template list.
- Rename: Not available yet—workaround is delete then save-as-template with a new name.

5.4 Preview and safety

- Use the Preview toolbar to switch devices, routes, and zoom. Keep “Include drafts” enabled while iterating.
- If more than 6 slides match a context, a banner warns you. Use “Distribute priorities” for deterministic ordering.
- A warning appears if production would suppress banners on checkout/auth.

5.5 Metrics

- Per-slide: Impressions, Clicks, and CTR shown in the Metrics panel; also shows top paths by impressions.
- Reset Metrics: Clears local counters to re-measure fresh changes.
- Note: These are local-only metrics (for your device), suitable for validation and quick A/B checks.

6) Publish Workflow (Recommended)

1. Create slides as Drafts and iterate in Preview with “Include drafts” on.
2. Validate on Desktop/Tablet/Mobile with Fit to window; sanity-check on your target routes.
3. Run Editor Checks and resolve warnings where practical.
4. Verify targeting (pages/roles/language/regions) and schedule windows.

5. Resolve priority ties; use "Distribute priorities" if needed.
6. Publish when satisfied. Optionally reset metrics and do a quick smoke-test.

7) Troubleshooting

- I don't see my slide in preview:
 - Ensure "Include drafts" is checked (if it's a Draft).
 - Check route: is the page included in "Pages" targeting?
 - Check schedule window (Start/End vs now) and timezone.
 - Check roles/language/regions targeting.
 - Look for the ">6 slides" warning; prioritize appropriately.
- Image not showing:
 - Verify the URL loads in a new tab and is accessible. Try re-uploading.
 - Provide tablet/mobile images if desktop crops awkwardly.
 - Set Image Alt for accessibility; review focal point.
- CTA issues:
 - Ensure CTA text and href are both provided. Editor Checks will flag mismatches.
 - If using the UTM builder, Save to apply parameters.
- Uploads failing:
 - Ensure you are logged in (token present). Try reloading the Admin page and retrying.
- Metrics seem wrong:
 - Remember they're local to your browser. Reset metrics and retry.
- Nothing changes on the live site:
 - Confirm the slide is Published and matches the live page's targeting and schedule. Drafts never show publicly.

8) Best Practices

- Keep headlines under ~60 characters; subheads under ~120.
- Provide mobile-optimized images and set the focal point.
- Always write descriptive alt text for images.
- Keep primary CTA copy short (≤ 18 chars is ideal) and meaningful.
- Use templates to speed up recurring campaigns and ensure consistency.
- Avoid targeting checkout/auth pages for promotions; minimize friction.
- Use schedule presets to avoid stale promos lingering.
- Use priorities like 0, 10, 20... to leave room for future inserts.

9) FAQ

- Q: How many hero slides can show at once?

- A: Up to 6 per context; the highest-priority (lowest number) eligible slides.
 - Q: Can I preview Drafts?
 - A: Yes—toggle “Include drafts in preview.” Drafts never appear to real users until published.
 - Q: Does zoom affect production?
 - A: No. Zoom is admin-only and changes preview scaling only.
 - Q: Can I rename templates?
 - A: Not yet. Delete and re-save with a new name as a workaround.
